

Application Note

ANSGG425091002 – SeaGauge G4 Firmware
update via HelmSmart-Cloud.com

Chetco Digital Instruments, Inc
Revision 091025

SeaGaugeG4 supports up to 12 resistive or voltage style analog sensor inputs and 3 pulse style inputs.

SeaGaugeG4 also provides 4 additional indicator/status inputs (18VDC max) and 4 relay driver (12VDC) outputs

Sensors are connected to the dual 20 pin Molex style connectors and analog voltages converted to digital protocol compatible with CAN bus and WIFI interfaces.

SeaGaugeG4 can trigger multiple alarms based on sensor voltages from any of the 12 analog inputs and 3 pulse inputs

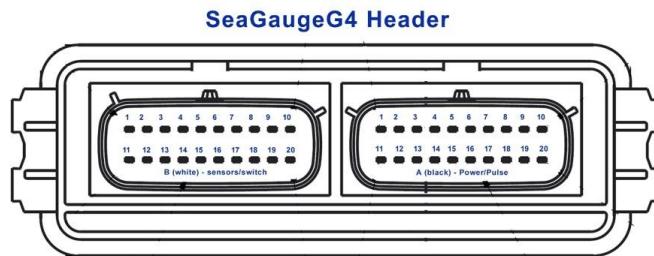

SeaGaugeG4 supports up to 12 analog sensor inputs and 4 indicator inputs via a 20 pin Molex MX150 plug (black) and 3 pulse style inputs via separate 20 pin Molex MX150 plug (white).

Molex style crimp pins are provided to attach 18 gauge tinned wire and insert into appropriate locations in supplied plugs.

The 4 indicator inputs (INC00-INC03) are used to provide on/off status for 12VDC circuits. When voltages of 10V to 18VDC are applied, the associated indicator channel will be set. When no voltage is applied, the indicator channel is cleared.

Each indicator channel has a runtime accumulator that counts the number of seconds the channel is active up to 16,777,216 seconds

B1 - NC	B11 - NC	A1 - SW5	A11 - SW4
B2 - NC	B12 - NC	A2 - SW7	A12 - SW6
B3 - SEN10 (SBOOST)	B13 - SEN11 (STRAN)	A3 - NC	A13 - NC
B4 - SEN04 (STEMP)	B14 - SEN05 (SOIL)	A4 - P1 (SRPM)	A14 - GND
B5 - SEN06 (SFUEL)	B15 - SEN07 (SBAT)	A5 - P0 (PRPM)	A15 - GND
B6 - SEN00 (PBAT)	B16 - SEN01 (PFUEL)	A6 - P2	A16 - GND
B7 - SEN02 (PTEMP)	B17 - SEN03 (POIL)	A7 - 5VOUT	A17 - 5VOUT
B8 - SEN08 (PBOOST)	B18 - SEN09 (PTRAN)	A8 - GND	A18 - GND
B9 - INC03	B19 - INC02	A9 - 12VIN	A19 = 12VIN
B10 - INC01	B20 - INC00	A10 - NC	A20 - NC

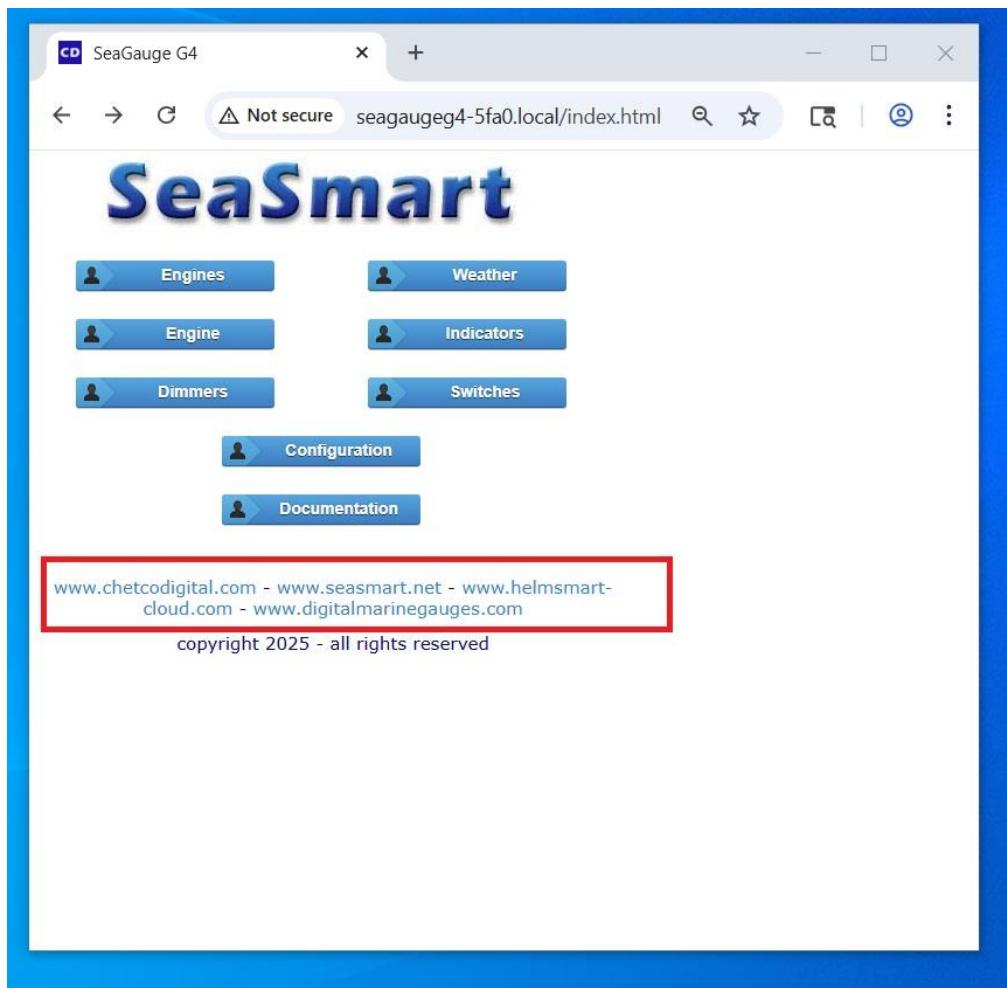

SeaGaugeG4 firmware can be updated using several methods including local SD card and over the internet using the HelmSmart-Cloud.com service.

This application note describes how to use an internet connection to update firmware and spiffs files to the latest version.

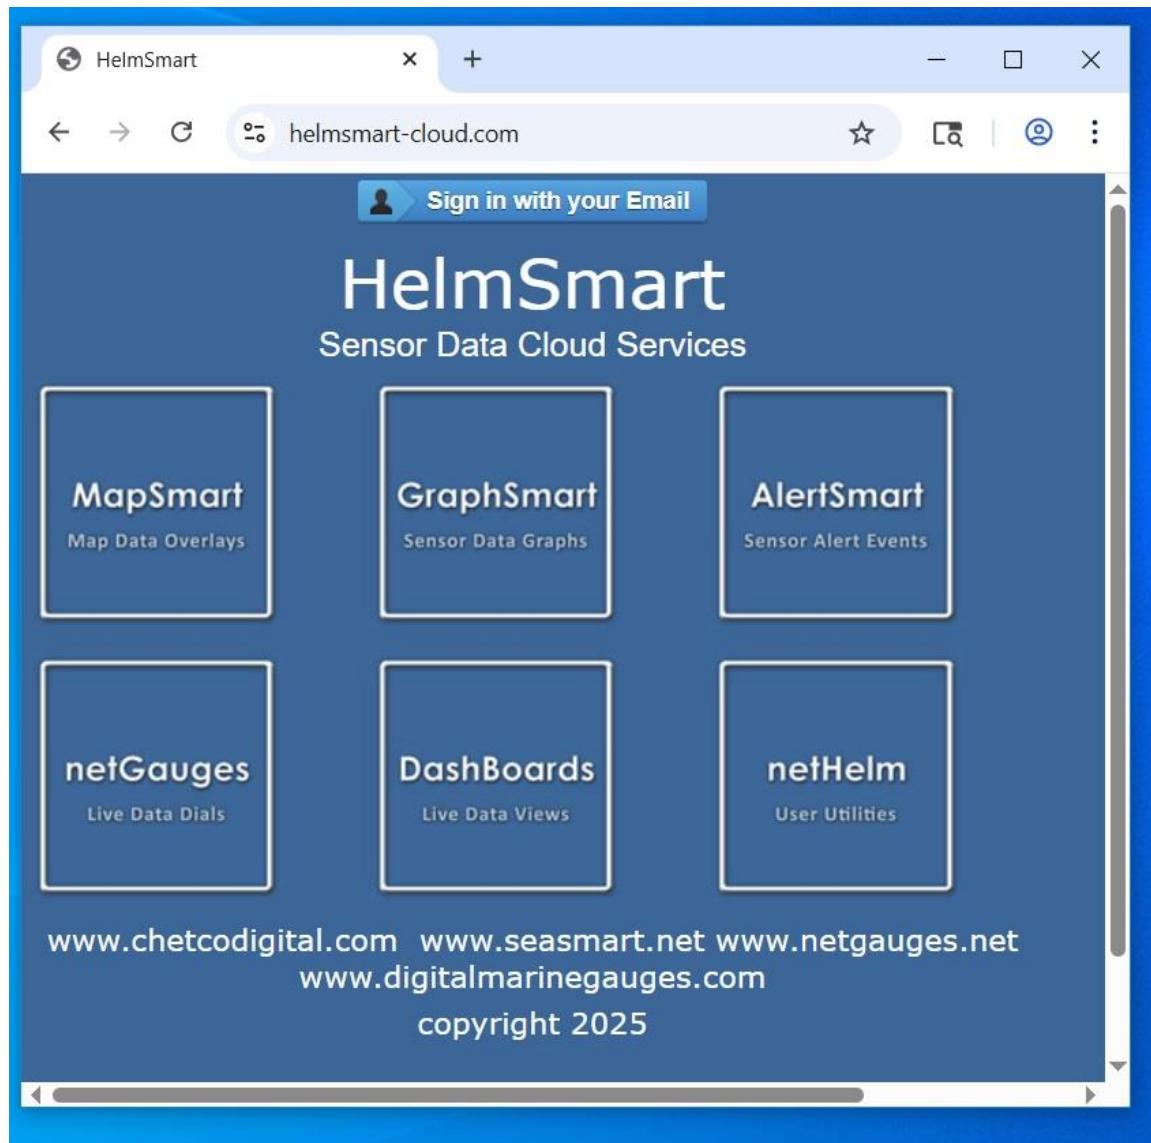

SeaGaugeG4 must be joined on a local network with internet connectivity (station or ethernet mode). Remote updates are not possible in AP mode.

This can be verified by using one of the links at the bottom of the device Home page

If selecting a link from the SeaGaugeG4 Configuration page brings up the target web site – then you have a good active internet connection to perform the remote update.

The bottom of the configuration page will have three remote update buttons.

- Firmware – updates the device firmware
- WWW – updates the device embedded web server files
- Calibrations – updates the stored analog sensor calibration files

The update procedure is the same for all three options.

The screenshot shows the 'SeaSmart' configuration interface for a device with DeviceID AC1518EF5FA0. The top navigation bar includes links for Home, Config, Status CAN, Status 0183, Files, and PGN Filters. A red box highlights the 'Version 1.9.3.8.8' text. Below this, a table displays network information: IP Address 192.168.254.40, SSID = Winchuck Mesh; IP Mask 255.255.255.0, Net Type=Station; IP Gateway 192.168.254.254, DHCP ENABLED; BSSID E0:63:DA:18:BC:FE, RSSI = -57; CELL DB 0, CELL AI=connected. A sidebar on the left lists various configuration sections like Boot Config, Network Mode, and Analog Input Configurations. At the bottom, there's a 'Local Device Configuration' section with Save Settings, Save XML, and Reset buttons. Another red box highlights the 'Firmware' button under 'HelmSmart-Cloud firmware updates'. The footer includes copyright 2025 and links to www.chetcodigital.com, www.seasmart.net, www.netgauges.net, and www.digitalmarinegauges.com.

Make note of the current firmware version before updating.

The screenshot shows the 'SeaSmart' configuration interface. At the top, there's a navigation bar with tabs: Home, Config, Status CAN, Status 0183, Files, and PGN Filters. The 'Config' tab is active. Below the navigation bar, the device ID 'DeviceID AC1518EF5FA0' is listed, followed by the current firmware version 'Version 1.9.3.8.8' which is highlighted with a red box. A section titled 'Current Network:' displays network settings: IP Address 192.168.254.40 (SSID = Winchuck Mesh), IP Mask 255.255.255.0 (Net Type=Station), IP Gateway 192.168.254.254 (DHCP ENABLED), BSSID E0:63:DA:18:BC:FE (RSSI = -57), and CELL DB 0 (CELL AI=connected). On the left side, a sidebar lists various configuration sections: Boot Config, Network Mode, Network Configurations, HelmSmart Configurations, TCP/UDP Configurations, SD logging Configurations, Port Configurations, Dimmer/Switch Configurations, Pulse Input Configurations, Analog Input Configurations, Analog Alarms Configurations, and Timestamp Configurations. At the bottom of the page, there are buttons for Local Device Configuration (Save Settings, Save XML, Reset) and HelmSmart-Cloud firmware updates (Firmware, WWW, Calibrations). The footer includes links to the company website and copyright information.

When the update starts – you will be reminded to have an active internet connection

The screenshot shows a web browser window titled "SeaGauge G4 Configuration Page". The URL in the address bar is "seagaugeg4-5fa0.local/conf.html". A modal dialog box is displayed in the center of the page with the following text:
"seagaugeg4-5fa0.local says
This action requires a active connection to the HelmSmart Server.
Please verify before proceeding"
The dialog has two buttons: "OK" and "Cancel".
Below the modal, the main configuration interface is visible. It includes:

- A sidebar with navigation links: Home, Config, Boot Config, Network Mode, Network Configurations, HelmSmart Configurations, TCP/UDP Configurations, SD logging Configurations, Port Configurations, Dimmer/Switch Configurations, Pulse Input Configurations, Analog Input Configurations, Analog Alarms Configurations, and Timestamp Configurations.
- A "Local Device Configuration" section with buttons for Save Settings, Save XML, and Reset.
- A "HelmSmart-Cloud firmware updates" section with buttons for Firmware, WWW, and Calibrations.
- Footer links: www.chetcodigital.com - www.seasmart.net - www.netgauges.net - www.digitalmarinegauges.com
- Copyright notice: copyright 2025

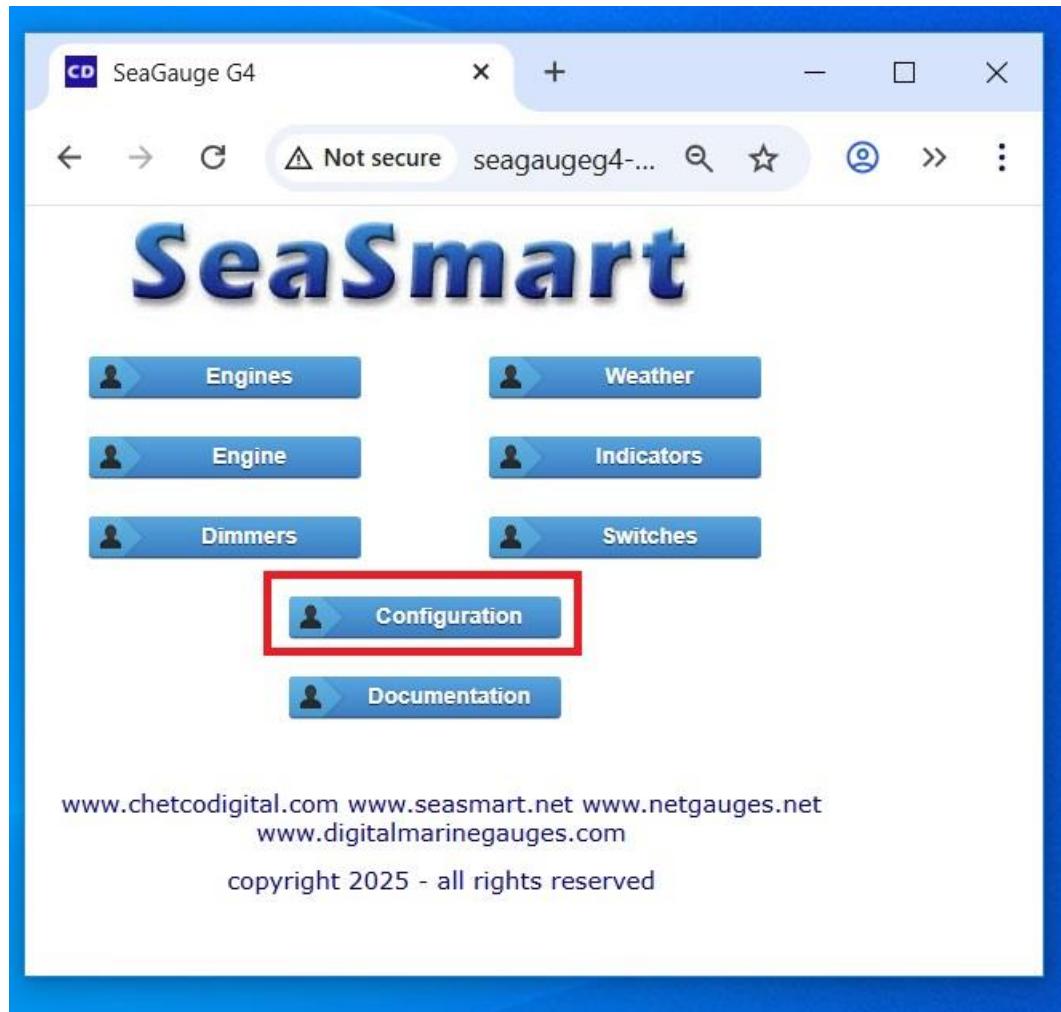

The update will download the latest firmware from the HelmSmart-Cloud.com server.
This may take 60 – 120 seconds

The screenshot shows the 'SeaSmart' configuration interface for a device with DeviceID AC1518EF5FA0. The top navigation bar includes Home, Config, Status CAN, Status 0183, Files, and PGN Filters. A message bar at the top indicates 'Not secure' and the URL seagaugeg4-5fa0.local/conf.html. The main content area displays network status: Current Network (IP Address 192.168.254.40, SSID Winchuck Mesh, Net Type Station, IP Mask 255.255.255.0, IP Gateway 192.168.254.254, BSSID E0:63:DA:18:BC:FE, RSSI -57, CELL DB 0, CELL AI=connected). On the left, a sidebar lists various configuration sections like Boot Config, Network Mode, Network Configurations, HelmSmart Configurations, TCP/UDP Configurations, SD logging Configurations, Port Configurations, Dimmer/Switch Configurations, Pulse Input Configurations, Analog Input Configurations, Analog Alarms Configurations, and Timestamp Configurations. A central modal window titled 'Downloading firmware file from server...' contains the text 'please reset device when complete'. At the bottom, there are buttons for Local Device Configuration (Save Settings, Save XML, Reset), HelmSmart-Cloud firmware updates (Firmware, WWW, Calibrations), and footer links to www.chetcodigital.com, www.seasmart.net, www.netgauges.net, and www.digitalmarinegauges.com, along with a copyright notice for 2025.

Once the download is complete – the device will return to the home page.

You must now reset the device to complete the update.

After rebooting device – verify the version update.

The screenshot shows a web browser window titled "SeaGauge G4 Configuration Page". The address bar indicates the URL is "seagaugeg4-5fa0.local/conf.html". The page header features the Chetco Digital Instruments logo and the "SeaSmart" brand name. To the right of the brand name is a "WIFI G3" icon. Below the header is a navigation menu with links for Home, Config, Status CAN, Status 0183, Files, and PGN Filters. The main content area displays device information, including "DeviceID AC1518EF5FA0" and "Version 1.9.3.9.8" (which is highlighted with a red box). Below this, there is a table of network configuration details:

IP Address 192.168.254.40	SSID = Winchuck Mesh
IP Mask 255.255.255.0	Net Type=Station
IP Gateway 192.168.254.254	DHCP ENABLED
BSSID E0:63:DA:18:BC:FE	RSSI = -63
CELL DB 0	CELL AI=connected

Below the table is a sidebar containing a list of configuration sections, each preceded by a blue triangle icon:

- ▶ Boot Config
- ▶ Network Mode
- ▶ Network Configurations
- ▶ HelmSmart Configurations
- ▶ TCP/UDP Configurations
- ▶ SD logging Configurations
- ▶ Port Configurations
- ▶ Dimmer/Switch Configurations
- ▶ Pulse Input Configurations
- ▶ Analog Input Configurations
- ▶ Analog Alarms Configurations
- ▶ Timestamp Configurations

At the bottom of the page, there are two sets of buttons: "Local Device Configuration" (Save Settings, Save XML dropdown, Reset) and "HelmSmart-Cloud firmware updates" (Firmware, WWW, Calibrations). The footer contains the copyright notice "copyright 2025" and links to various websites: www.chetcodigital.com, www.seasmart.net, www.netgauges.net, and www.digitalmarinegauges.com.

The procedure will be the same for updating both SPIFF files (WWW & Calibrations)

The screenshot shows the SeaSmart G4 Configuration Page. At the top, there is a navigation bar with links for Home, Config, Status CAN, Status 0183, Files, and PGN Filters. Below the navigation bar, the device ID is listed as AC1518EF5FA0 and the version is 1.9.3.9.8. A section titled "Current Network:" displays network information: IP Address 192.168.254.40 (SSID = Winchuck Mesh), IP Mask 255.255.255.0 (Net Type=Station), IP Gateway 192.168.254.254 (DHCP ENABLED), BSSID E0:63:DA:18:BC:FE (RSSI = -66), and CELL DB 0 (CELL AI=connected). On the left side, there is a sidebar with a list of configuration options: Boot Config, Network Mode, Network Configurations, HelmSmart Configurations, TCP/UDP Configurations, SD logging Configurations, Port Configurations, Dimmer/Switch Configurations, Pulse Input Configurations, Analog Input Configurations, Analog Alarms Configurations, and Timestamp Configurations. At the bottom of the page, there is a "Local Device Configuration" section with buttons for Save Settings, Save XML, and Reset. Below this, there is a "HelmSmart Cloud Firmware update" section with three buttons: Firmware, WWW, and Calibrations. The "WWW" and "Calibrations" buttons are highlighted with red boxes.
